

# AgStudio 2020 Version 24.3

May 14, 2020

## Release Notes

### **Bug Fixes**

- ✎ Corrected an issue that was causing AgStudio to become unresponsive when attempting to download ERU data.
- ✎ Updated how the soil test processing service handles .xml files that do not contain source attributes that are present in the soil test definitions configuration. The processor will now skip the missing source attribute and continue to load the remainder of the data from the lab file.
- ✎ Revised the Crop Zone Overview Map report to correct a misspelling in the 'Crop Zone Yield Goal Unit' as well as allow it to correctly display on the report.

### **Card Manager Updates**

- ✎ Updated the ISO card manager to ensure it is reading ISO harvest data for AGCO\_V3.
  - ✎ Enhanced the error messages received from AgLeader YLD data to get rid of extraneous information.
  - ✎ Updated all card managers using ADAPT to the latest versions (John Deere Gen4, ISO XML, Climate FieldView, and Precision Planting 2020)
  - ✎ Corrected the Deere GS4 card manager to ensure proper moisture readings from some, but not all, harvest field ops.
  - ✎ Updated the Deere FieldOp card manager to use the TargetRate as a backup value when the AppliedRate value is missing.
-
