

AgStudio 2020 Version 24.4

June 2, 2020

Release Notes

Bug Fixes

- 🔗 Corrected the Application Summary Report (Detail View by Product) to properly round the Total Quantity to two decimal places.
- 🔗 Updated the Protobuf Extract to remove invalid characters, such as colons, from the product name before creating the pathname, which includes the product name.

Card Manager Updates

- 🔗 Updated the Deere Gen4 card manager to handle duplicate data within the JD-Data folder.
 - 🔗 Corrected Deere Gen4 manure application data to display units correctly (ex. previously showing Milliliters instead of Gallons).
 - 🔗 Updated the Deere Gen4 card manager to scan and display multiple task types.
 - 🔗 Corrected the unit from 'cm' to 'm' on the Elevation attribute when importing Deere Gen4 data.
 - 🔗 Implemented Spring updates to the following OEM data translation components: John Deere, AgLeader, and Precision Planting.
 - 🔗 Inserted an override in VRS Export for Kinze Blue Vantage to force the task/operation to "Planting" when it finds the task that is "Seed Proposal".
 - 🔗 Corrected the AgLeader .agsetup file to properly include the Rx files when exporting prescriptions.
 - 🔗 Updated the card manager for Case CN1 application data to update CNH's "other" product form as mass giving data with a "none/acre" data unit a "lb/acre" unit, and the card manager is now filtering out outlier sites, which were skewing the map.
-
