

AgStudio 2020 Version 24.5

June 24, 2020

Release Notes

Card Manager Updates

- ✎ Corrected an issue with shapefile exports that was causing duplication of exported prescription files. Previously, when using the “One file per product” option, prescriptions had the potential to get overwritten, and when using the “All products on one file” option, duplicate set of prescriptions files were exported.
 - ✎ Updated the statistical data filtering for Kinze Blue Vantage data. The previous filter was too aggressive resulting in a loss of visible data on the map.
 - ✎ Removed the obsolete Greentronics card manager.
 - ✎ Corrected a container mis-association on Deere GS3 data containing multiple seeding operations plus additional application operation.
 - ✎ Updated ADAPT card managers, specifically Precision Planting, to stop creating multiple op regions for single-pass applications. Instead, one op region is created as desired.
 - ✎ Fixed an acres totaling issue for ADAPT card managers.
 - ✎ Upgraded the Precision Planting plugin to v 24.1.
 - ✎ Implemented a work around for missing engagement sensor for Precision Planting Liquid in latest plugin.
 - ✎ Corrected an issue that was causing fieldnames to be exported at _1, _2, etc. when exporting a CNH setup card.
 - ✎ Updated the logic for exporting variety locator layers for CNH & AgLeader Versa to handle the layer type assigned to variety layers.
-
