

October 1, 2020

Release Notes*Enhancements*

- ✎ Added or amended QR codes to submittal sheets for the AgroLab, AgSource, Southeastern AgLab, and Spectrum Analytic labs.

Bug Fixes

- ✎ Code changes to improve our satellite imagery service.

Card Manager Updates

- ✎ Fixed high yield issue for Case .cn1 data.
 - ✎ Corrected a distance calculation issue with Climate card manager leading to inflated harvested acres.
 - ✎ Improved handling of Harvest data when a header is not engaged with ADAPT (Climate, Precision Planting, and ISO) card managers, which resulted in width issues.
 - ✎ Fixing issues calculating width and area with certain ISO data, in particular Topcon harvest.
 - ✎ Improved logging for otherwise valid shapefiles with no data, allowing these files to process.
 - ✎ Updated to the latest AgLeader components.
 - ✎ Improved handling of downsampled data to fix dropped datapoints due to record count mismatch errors.
 - ✎ Improved our ability to read zipped files from Macs on Corteva Fields import tools.
 - ✎ Ensured that field names and varieties load correctly in GS4 monitors when exporting a GS3 setup card with valid variety layers.
 - ✎ Add ability to read ISOXML data even if *TaskControllerVersion* information is missing.
-
