AgStudio

AgStudio 2020 Version 24.9

November 11, 2020

Release Notes

Bug Fixes

- Improved handling of exports to Deere monitors to work with Deere's 20-character limit.

- Fixed an issue in which VRF export did not include reports for AgLeader Versa format when selecting 'include reports with export.'

- Resolved raster conversion error in VRF export. The tool will now successfully convert the raster size upon export.

- Fixed unit conversion issues with AgLeader ILF/Versa, CNH, Kinze and ISO exporters.

- Improved handling of blank Rx maps with Kinze exports.

- AgStudio error logs now direct to the correct support email.

Card Manager Updates

- Improved handling of product use info in AgLeader split-plant data.

- Fixed problems with Climate data, including calculating grainflow and handling invalid GPS data.

- Resolved issue recognizing product use information with Deere GS4 cotton data.

- Updated to latest version of the ISO (taskdata) plugin and corrected issue handling certain units in ISO data.

- Updated to latest Precision Planting plugin.

- Resolved issue with high yield data from Case Monitors.
