

February 11, 2021

**Release Notes***Enhancements*

- 🔗 Changes to the Satellite Imagery extension: Acres must be subscribed to receive imagery thumbnail previews. Please see the following job aids for more information:
  - [Subscribing Acres](#)
  - Using Satellite Imagery: [written](#), [video](#), or [webinar](#).
- 🔗 Added new units for CEC:  $\text{cmolc/dm}^3$  and  $\text{dmolc/dm}^3$ .
- 🔗 Median has been added to the supported Derived Statistics in AgStudio Calculators. Use options are MedianRS<variablename> or MedRS<variablename>.

*Bug Fixes*

- 🔗 Fixed report book zoom levels issue to include more tiers, resulting in improved readability on certain large fields.
- 🔗 Repaired bug related to some soil type layers failing to update with the field boundary.

*Card Manager Updates*

- 🔗 **ADAPT:**
    - Repaired out-of-memory error importing ISO Adapt data
    - Added filters for bad timestamp data
    - Flexibly recognize crop information from both “cropzone” and “crop” columns
    - Correctly handle non-zero Y-offsets
    - Resolved error scanning certain .2020 files
  - 🔗 **DFO:** Fixed issues related to understanding units
  - 🔗 **Precision Planting:**
    - Updated to latest Precision Planting Adapt plugin
    - Fixed issue with empty rows
    - Repaired issue with Gen3 yield data inaccuracy
  - 🔗 **Case IH:** Fixed inflated acres due to bad distances in downsampled CNH harvest data
-
