

April 12, 2021

Release Notes**Enhancements**

- ☞ Implemented new authentication model for My John Deere wireless data transfer to maintain compatibility with Deere's updated infrastructure.
- ☞ Increased error message clarity for John Deere partnership invitations
- ☞ Moved to a different Soil Services endpoint for retrieving Soil Types data; no action is needed.

Bug Fixes

- ☞ Resolved issue retrieving geopolitical info (County, State, County) under certain conditions, affecting services such as *Edit Field details* and *Zoom To County*.
- ☞ Resolved issue pulling a composite satellite image from more than 30 days of imagery.
- ☞ Corrected an issue where certain user types experienced errors when running jobs at the server level.

Card Manager Updates

- ☞ Corrected cause of high yield average in ADAPT card managers.
 - ☞ Improved data quality of Precision Planting Gen1-2 files.
 - ☞ Fixed incorrect identification of split planter acres in Precision Planting data.
 - ☞ Updated Climate card manager to properly display all hybrids from a split variety planter.
 - ☞ Corrected an issue that prevented exports to AgLeader ILF and TGT device formats.
 - ☞ Repaired a naming issue for GS3, Kinze, and AgLeader Versa on VRF Export files and corresponding reports where a number was being appended to the end of the Grower Name and the Farm Name was displayed as the Field Name.
-
